

Luminous posts from the italian design

MOONLINE is a revolutionary product. Behind formal research lies the will to review the actual concept of "fencing": no longer a mere element to separate the inside from the outside, MOONLINE creates uninterrupted spaces. Architecture and design extend from the interior to the exterior transforming it into a minimalist "place of communication"; linear designs are dotted with luminous posts and LED technology is applied according to the latest car design trends. The integrated and modular MOONLINE system is the maximum expression of the "made in Italy" label and the result of Cavatorta's know how; MOONLINE is a new way of protecting your spaces: light outlines the contour becoming a safety element (it can be integrated with other systems thanks to the "active" posts). A selection of shapes, colours and light intensities is available for a system in harmony with architectural structures and personal tastes. Beautiful during the day and fascinating at night. Always safe. MOONLINE, never seen before.

Day view impressive design

The revolution of the fencing sector. The differentiated mesh characterized by its exclusive "wave" effect", the essential look of the posts with concealed fixing

elements, corners without visual interruptions and gates which are "works of art" are combined to create absolutely innovative and refined effects.

Mesh

The panels are made of different sized mesh: the width increases and decreases progressively for maximum safety performance and original design. The double horizontal wire guarantees excellent panel stiffness.

Posts

The posts have been designed to hide the fixing elements and the ground anchoring system: the result is a clean and essential look never seen before.

Corners

Corner posts have been eliminated: the corners are created using special preformed mesh panels. The aesthetic effect is inspired by the severe geometries of the Bauhaus style

Gates

The design of the gates is different for each line: sophisticated during the day and high safety performance at night thanks to the special lighting.

Colours

All the elements of the two O TYPE and Q TYPE lines are available in four colours for solutions in harmony

with the architectural structures: Pure White, Racing Green, Silver and Antraxit.

Night view light revelations

The night is tinged with safety. The light of the MOONLINE system outlines the perimeter areas and the access places creating elegant and fascinating effects. Light, the first defence against external threats, is transformed into a decorative design element.

Posts

Lighting design applied to the posts: lighting points increase safety and can be integrated with additional systems thanks to the wiring inside the posts.

Gates

The light outlines the gates with geometric shapes for improved functional and aesthetic characteristics. Increased safety at the access places and unique elegance.

Ledtech

MOONLINE exploits LED technology which guarantees long duration, low consumption and high luminosity. The lighting points can be controlled using the control unit to adjust the intensity and colour effects.
